

ABSTRACT

LIQUEFIED GAS INSTALLATION

5 An installation comprises a vault 4 housing a liquefied storage tank 2, a
chamber 14 within the vault 4 accessible to personnel, a liquefied gas inlet
pipeline leading to the gas storage tank 2, a liquefied gas supply pipeline 22
extending from the storage tank 2 through a vaporiser 37 out of the vault 4
and at least one first cabinet 34, 36, 38 through which the liquefied gas supply
10 pipeline 22 passes. The first cabinets 34, 36, 38 are located in the chamber
and house items of equipment in the liquefied gas supply pipeline 22 which
have an associated risk of leakage. There is also at least one first extractor
fan communicating with the first cabinets 34, 36, 38 and means separate from
the first extractor fan for changing the atmosphere in the chamber.
